Business Requirements Document

MagicBricks Premium Listing and Advertising Targeting Dashboard

Item	Detail
Project	Where should MagicBricks target premium listings and advertising to maximise revenue?
Document version	1.0
Prepared by	Business Analyst
Prepared for	Head of Sales and Marketing, MagicBricks
Data source	Magic Bricks Dataset.xlsx (1,530 listings, 15 columns)
Dashboard tool	Power BI (2 pages: Property Segmentation, Location Targeting)
Data period	02 Jan 2023 to 03 Dec 2025

1. Purpose and background

MagicBricks earns revenue as commission on property listings. Sales and marketing spend on premium listings and ads is limited, so it must go to the places where it returns the most. Today there is no single view that shows which cities, localities and property segments earn the most commission. This document defines the requirements for one dashboard that answers that question.

2. Business problem

Core question: Which property segments and locations should MagicBricks target for premium listings and advertising to maximise revenue?

- Revenue is concentrated: Mumbai and Delhi NCR together contribute 39% of total commission.
- Value per listing differs widely by city (Rs. 64.1 L in Mumbai against Rs. 13.0 L in Lucknow), so equal ad spend in every city is wasteful.
- Owner listings (496 of 1,530) carry Rs. 0 commission in the data, so they are an untapped upsell pool, not current revenue.

3. Objectives and success criteria

#	Objective	Success measure
O1	Identify the highest-earning cities and localities	Top cities and top 10 localities visible on one page
O2	Identify the best property segments (BHK, New/Resale)	Segment ranking by total commission shown
O3	Classify every city as Premium, Selective or Maintain	All 10 cities carry a tier with a clear rule
O4	Show where free owner listings can be upsold	Owner listing count shown per city
O5	Give a clear action for the Sales Head	Targeting priority table with a tier and action per city

4. Scope

In scope

- Commission revenue analysis by Location, Locality, BHK and Transaction (New/Resale).
- City tiering using Total Revenue, Total Listings and Avg Revenue per listing.
- Owner listing count as an upsell indicator.
- Revenue by Furnished status and by Seller Type (Builder, Broker, Owner) for each city.

Out of scope

- Buyer behaviour, page views or lead data (not in the dataset).
- Forecasting and pricing prediction.
- Real-time data refresh.

5. Stakeholders

Stakeholder	Role	Interest
Head of Sales	Primary user	Decides which cities and segments get premium push
Marketing Manager	User	Allocates advertising budget by city and segment
Product Manager	User	Designs premium listing and service-layer products
Business Analyst	Owner	Builds and maintains the dashboard

6. Data requirements

Source file: Magic Bricks Dataset.xlsx, one sheet, 1,530 rows. Seller mix: Builder 542, Owner 496, Broker 492. Transaction mix: New 797, Resale 733. Cities: 10. Localities: 60.

Field	Used for
Listing_iD	Count of listings (unique key)
Location	City grouping and tiering
Locality	Top micro-market ranking
BHK	Segment analysis (1 to 5 BHK)
Transaction	New vs Resale segment
Seller_Type	Builder, Broker, Owner split; owner upsell pool
Price, Price Per SQFT	Price context per city and locality
Commission	Revenue measure (main metric)
Listing_Date, Month	Period of data coverage
Size, Bathroom, Balcony, Furnished	Available for extra segment filters

Data quality notes

- Furnished has two spellings of the same value ('Semi furnished' 484 rows, 'Semi Furnished' 21 rows). They are merged into one category in the dashboard.
- Owner listings have Commission = 0 by design; they must not be read as low demand.

- Data thins out toward the end of 2025, so a monthly trend is not used in this dashboard.

7. KPI definitions

KPI	Definition	Formula
Total Revenue	Commission earned (Rs. Cr)	SUM(Commission) / 10,000,000
Total Listings	Number of listings	COUNT(Listing_iD)
Avg Revenue per Listing	Value of one listing (Rs. Lakh)	SUM(Commission) / COUNT(Listing_iD) / 100,000
Free Owner Listings	Owner listings with no commission	COUNTROWS(Seller_Type = Owner)
Revenue Share	City share of total commission	City revenue / Total revenue

8. Tiering logic (Premium, Selective, Maintain)

Each city is judged on three dimensions: Total Revenue, Total Listings and Avg Revenue per listing. Revenue sets the tier, and the other two confirm demand and value per listing. A city is Premium only when money and demand are both high, which creates a vacuum where no premium service exists and an opportunity to serve.

Tier	Rule (Total Revenue)	Action	Cities
Premium	70 Cr or more, with high listings and high avg revenue	Premium listings and full ad push	Mumbai, Delhi NCR
Selective	40 Cr to under 70 Cr	Targeted ads for top segments only	Pune, Bangalore, Hyderabad
Maintain	Under 40 Cr	Keep standard listings, no premium budget	Chennai, Kolkata, Jaipur, Ahmedabad, Lucknow

The thresholds (70 Cr and 40 Cr) are a business choice and can be changed in the Tier measure.

9. Dashboard requirements

ID	Page	Component	Requirement
F1	1 Property Segmentation	KPI cards	Total Revenue (446 Cr); Mumbai + Delhi NCR Revenue (174.8 Cr, 39%); 2BHK + 3BHK Revenue (301 Cr, 67%); Total Listing With No Revenue - Owners (496)
F2	1	Total Revenue by BHK and Transaction (Cr)	Bar chart of commission by BHK and New/Resale, sorted high to low
F3	1	Average Revenue per Listings (Lac)	Bar chart of avg commission per listing by city
F4	1	City x Furnished Revenue Heatmap (Cr)	Matrix of commission by city and Furnished, Semi furnished, Unfurnished
F5	1	City x Seller Type Revenue Heatmap (Cr)	Matrix of commission by city and Broker, Builder, Owner
F6	2 Location Targeting	Total Revenue by City (Cr)	Bar chart of total commission by city

ID	Page	Component	Requirement
F7	2	Average Revenue by Locality (Cr)	Bar chart of top localities by commission. Values shown are commission per locality
F8	2	City x BHK revenue heatmap (Cr)	Matrix of commission by city and 1 to 5 BHK
F9	2	Targeting priority by city	Table: Location, Tier, Total Revenue (Cr), Total_Revenue_per_listing (Lac), Free_Owner_Count, Total Listings

Design rules: two pages, only charts that serve the core question, consistent Rs. Cr and Rs. Lac units, red colour scale on heatmaps (darker = higher).

10. Key findings from the data

Finding	Value
Total commission	Rs. 446.2 Cr
Mumbai / Delhi NCR commission	Rs. 98.8 Cr / Rs. 76.0 Cr (39% combined)
Avg commission per listing	Mumbai Rs. 64.1 L, Delhi NCR Rs. 41.1 L, Lucknow Rs. 13.0 L
Biggest segment	3BHK Resale, Rs. 89.3 Cr; 2BHK + 3BHK = 67% of revenue
Highest value per listing among volume segments	4BHK Resale, Rs. 52.9 L
Top localities	Powai 21.8 Cr, Bandra 17.8 Cr, Borivali 17.3 Cr (all Mumbai)
Seller type	Mumbai Builder Rs. 59.9 Cr vs Broker Rs. 38.9 Cr; Owner is Rs. 0 in every city
Free owner listings	496 overall; 41 in Mumbai and 50 in Delhi NCR

11. Business recommendations the dashboard supports

- **Premium push:** Mumbai and Delhi NCR, starting with Powai, Bandra, Borivali, Thane, Gurgaon, Rohini and Saket.
- **Segments:** feature 3BHK Resale and 2BHK; promote 4BHK Resale for higher payout per listing.
- **Selective ads:** Pune, Bangalore and Hyderabad, mainly 3BHK.
- **Maintain:** no premium ad budget in the five Tier 3 cities.
- **Upsell:** convert free owners in Mumbai and Delhi NCR to paid premium listings.

12. Assumptions, constraints and risks

Type	Description
Assumption	Commission in the dataset is the revenue MagicBricks earns per listing.
Assumption	The dataset represents all listings for the period.
Constraint	No lead, click or conversion data, so demand is measured by listing count.
Constraint	Static Excel source; refresh is manual.

Type	Description
Risk	Inconsistent text values (for example Furnished) can split counts if not cleaned.
Risk	Tier thresholds are judgement-based and may need review as new data arrives.

13. Acceptance criteria

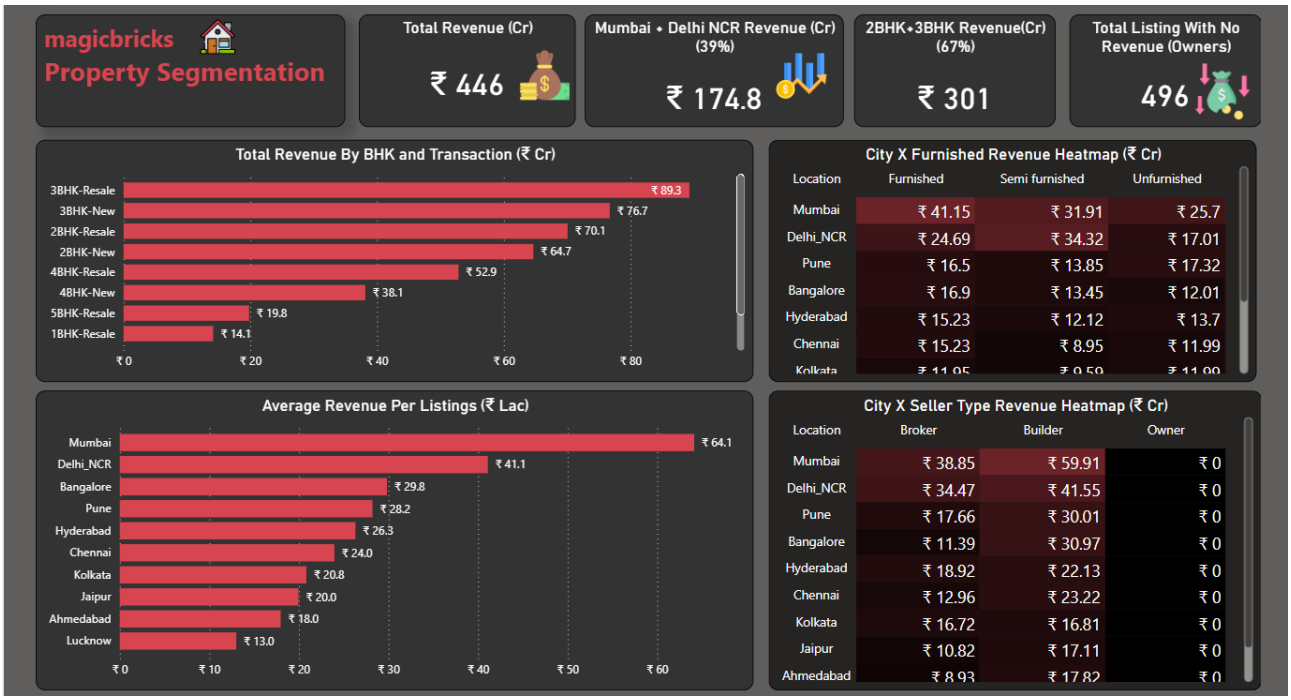

- Dashboard totals match the dataset: 1,530 listings and Rs. 446.2 Cr commission.
- Every city shows one tier, and the tier follows the rule in section 8.
- All charts relate to the core question; no unrelated visuals.
- The Head of Sales can read the recommendation without help from the analyst.

14. Sign-off

Name	Role	Signature	Date
	Head of Sales		
	Marketing Manager		
	Business Analyst
